UNIVERSITAS JEMBER

2026

AKTIVITAS 5

1. Buat Resource Controller: `php artisan make:controller MenuController --resource --model=Menu`

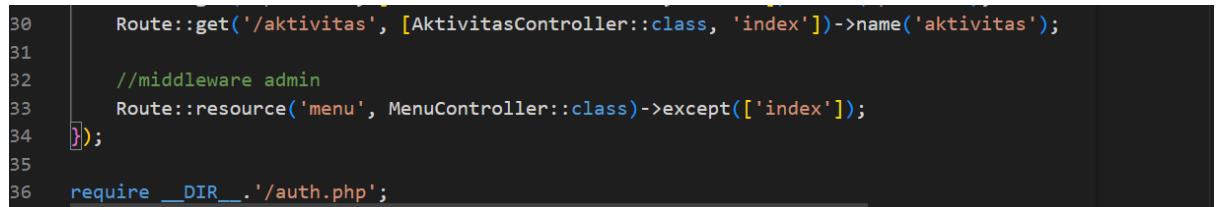

The screenshot shows the VS Code interface. On the left, the file explorer shows the project structure: PWEBPROJEK > app > Http > Controllers. The file `MenuController.php` is selected. The editor shows the following PHP code:

```
35 if ($request->hasFile('foto')) {
36     $data['foto'] = $request->file('foto')->store('menu-image');
37 }
38
39 Menu::create($data);
40 return redirect()->route('menu')->with('success', 'Menu berhasil');
41 }
```

Below the editor, the terminal shows the command `php artisan make:controller MenuController` and an error message: `ERROR Controller already exists.`

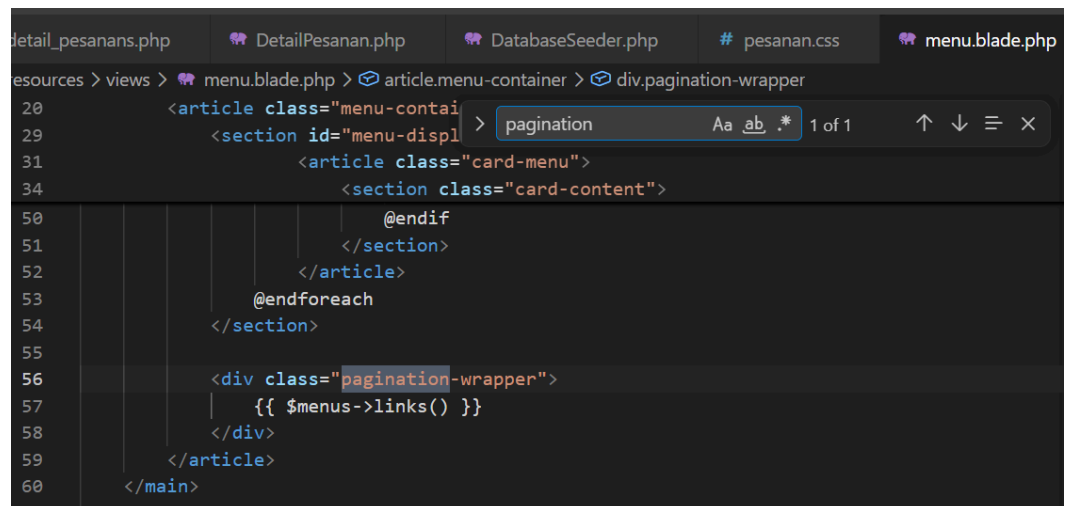

2. Daftarkan di routes/web.php: `Route::resource('menu', MenuController::class)`

The screenshot shows the `routes/web.php` file in VS Code. The following code is visible:

```
30 Route::get('/aktivitas', [AktivitasController::class, 'index']->name('aktivitas'));
31
32 //middleware admin
33 Route::resource('menu', MenuController::class)->except(['index']);
34 });
35
36 require __DIR__.'/auth.php';
```

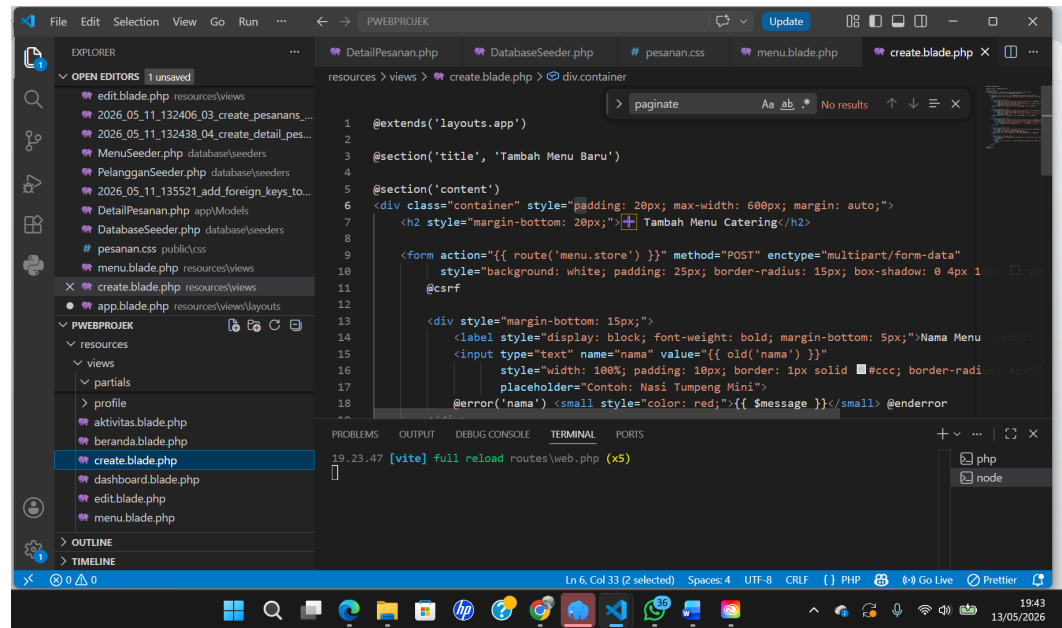

3. Buat semua view: `menu/menu.blade.php` (tabel + pagination), `create.blade.php` (form), `edit.blade.php` (form pre-filled), `show.blade.php` (detail)
- `menu.blade.php`

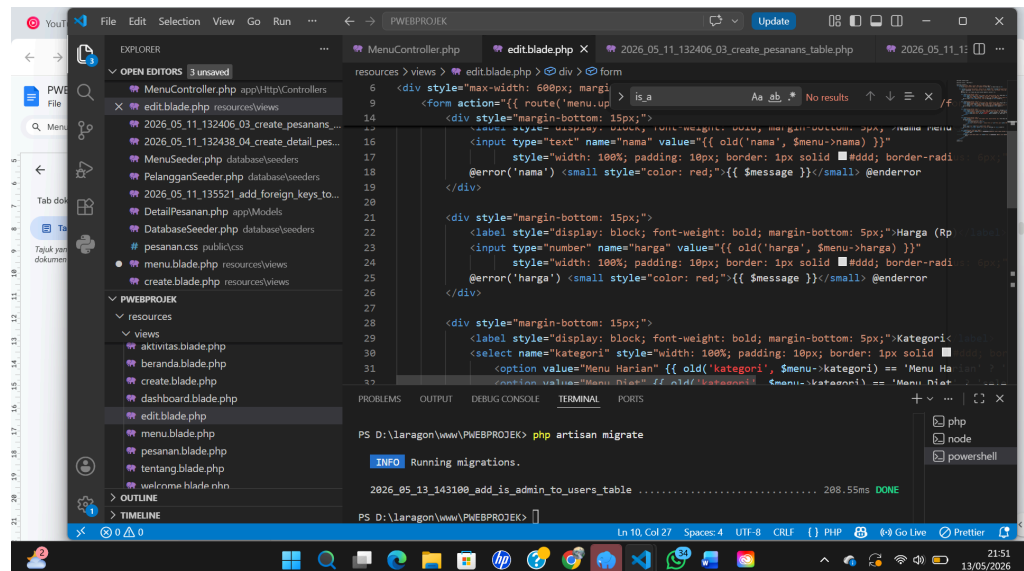

The screenshot shows the `menu.blade.php` file in VS Code. The code is as follows:

```
resources > views > menu.blade.php > article.menu-container > div.pagination-wrapper
20 <article class="menu-container">
21     <section id="menu-display">
22         @foreach($menus as $menu)
23             <article class="card-menu">
24                 <section class="card-content">
25                     <h3>{{ $menu->name }}</h3>
26                     <p>{{ $menu->description }}</p>
27                     <p>{{ $menu->price }}</p>
28                 </section>
29             </article>
30         @endforeach
31     </section>
32
33     <div class="pagination-wrapper">
34         {{ $menus->links() }}
35     </div>
36 </article>
37 </main>
```

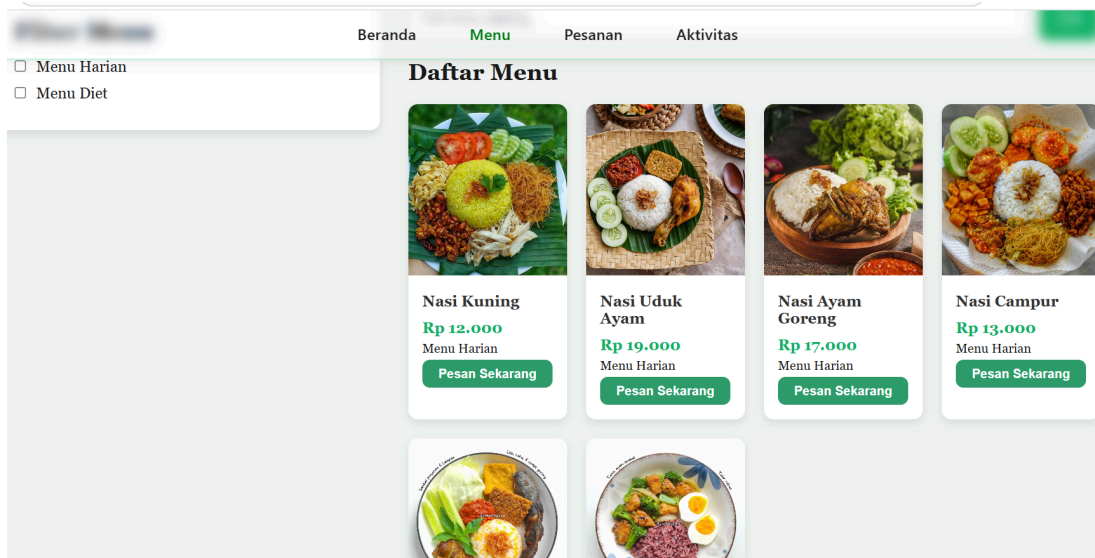

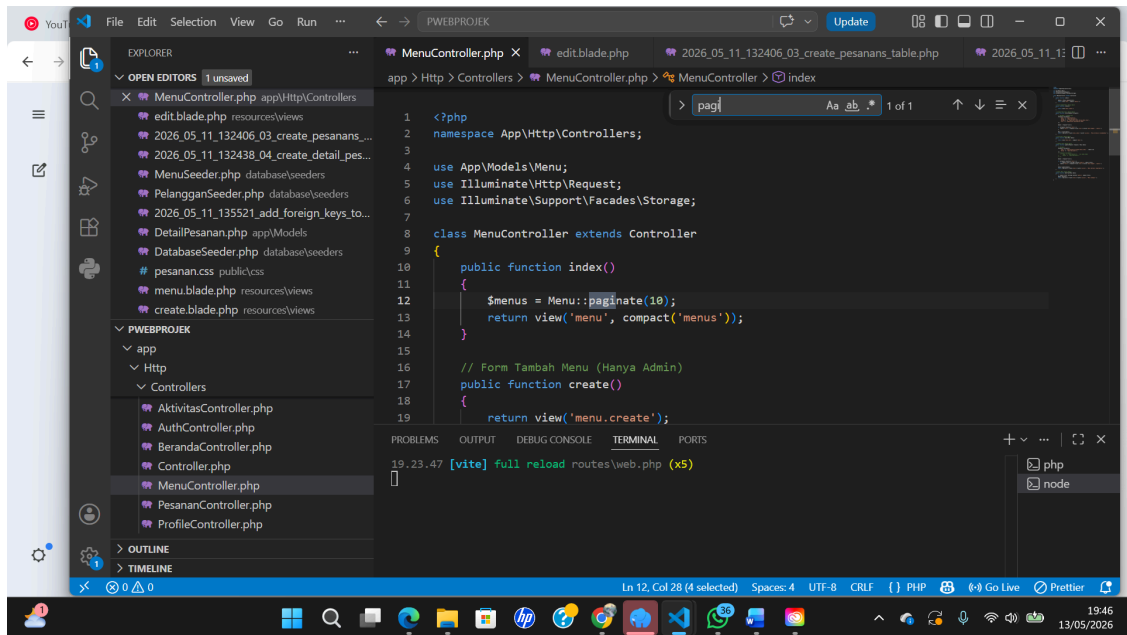

- `create.blade.php`

- edit.blade.php

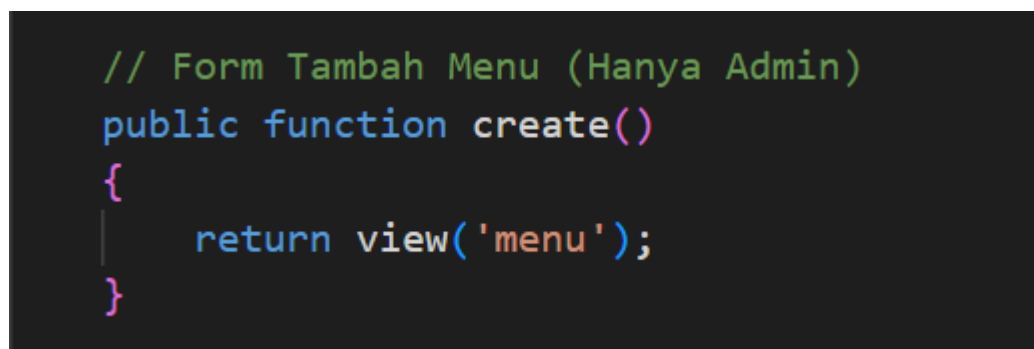

4. Implementasi method index() — ambil semua menu dengan paginate(10) dan tampilkan ke view

5. Implementasi create() dan store() — dengan validasi nama (min:3), email (email|unique), kategori (in:Menu Harian, Menu Diet)

- create

- store()

```
// Simpan Menu Baru (Hanya Admin)
public function store(Request $request)
{
    // Validasi + upload foto
    $request->validate([
        'nama' => 'required|min:3',
        'harga' => 'required|numeric',
        'kategori' => 'required|in:Menu Harian,Menu Diet',
        'foto' => 'image|mimes:jpg,png|max:2048'
    ]);

    $data = $request->all();
}
```

6. Implementasi edit() dan update() — tampilkan form dengan old() atau \$menu->field, validasi unique kecuali ID ini

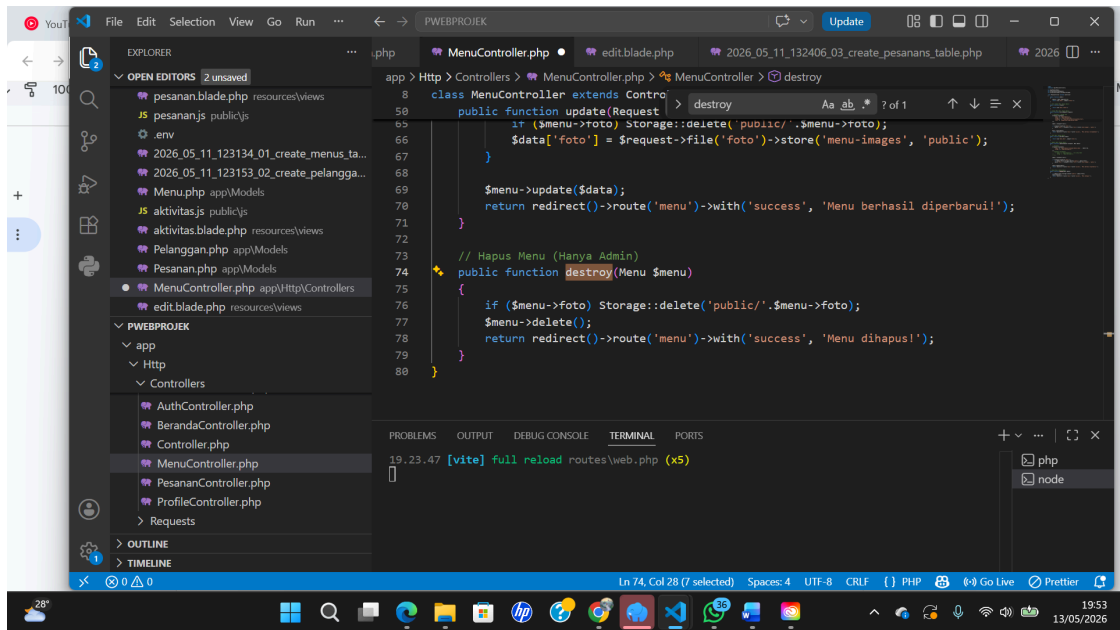

- edit()

```
// Form Edit (Hanya Admin)
public function edit(Menu $menu)
{
    return view('menu.edit', compact('menu'));
}
```

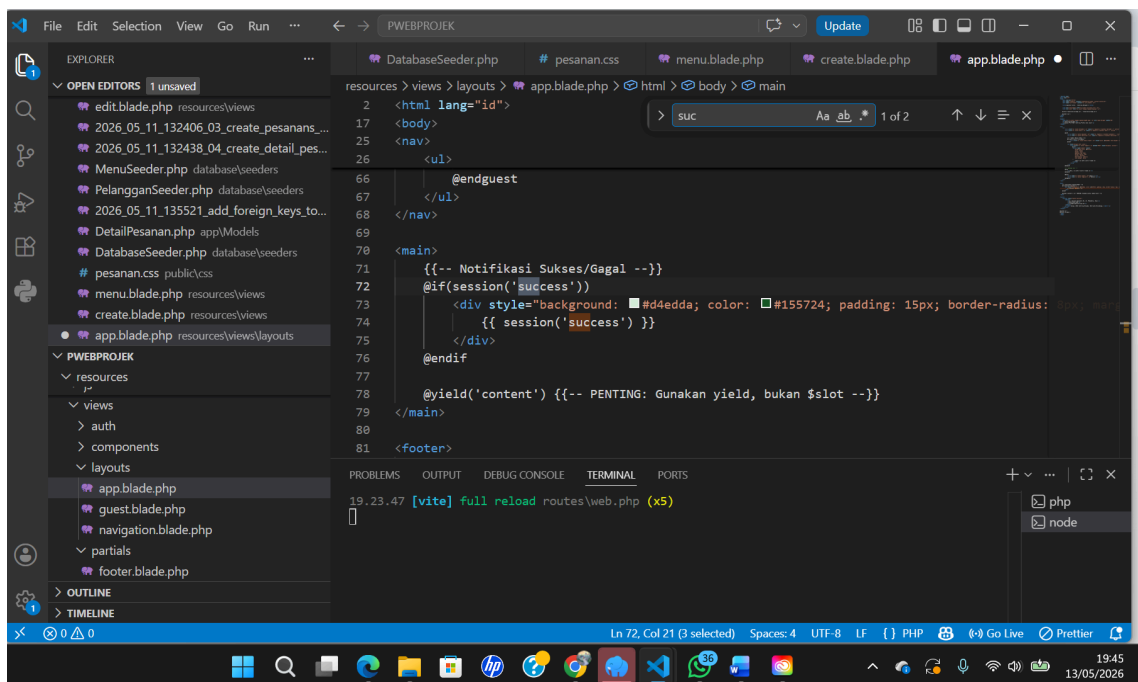

- update()

```
MenuController.php • edit.blade.php 2026_05_11_132406_03_create_pesanan_table.php 2026_05_11_
app > Http > Controllers > MenuController.php > MenuController > destroy
8 class MenuController extends Controller
49 // Update Data (Hanya Admin)
50 public function update(Request $request, Menu $menu)
51 {
52     // Validasi
53     $request->validate([
54         'nama' => 'required|min:3|unique:menus,nama,' . $menu->id,
55         'harga' => 'required|numeric',
56     ]);
57     // $request->validate([
58         // 'nama' => 'required|min:3', (ini yang lama)
59         // 'harga' => 'required|numeric',
60     // ]);
61
62     $data = $request->all();
63
64     if ($request->hasFile('foto')) {
65         if ($menu->foto) Storage::delete('public/' . $menu->foto);
66         $data['foto'] = $request->file('foto')->store('menu-images', 'public');
67     }
}
```

7. Implementasi destroy() — dengan konfirmasi JavaScript sebelum hapus

8. Tambahkan flash message di layout dan tampilkan session('success') / session('error')

9. BONUS: Tambahkan fitur upload foto menu dengan validasi image|mimes:jpg,png|max:2048

```
// Simpan Menu Baru (Hanya Admin)
public function store(Request $request)
{
    // Validasi + upload foto
    $request->validate([
        'nama' => 'required|min:3',
        'harga' => 'required|numeric',
        'kategori' => 'required|in:Menu Harian,Menu Diet',
        'foto' => 'image|mimes:jpg,png|max:2048'
    ]);

    $data = $request->all();
}
```

AKTIVITAS 6

1. Instal Laravel Breeze: composer require laravel/breeze --dev, kemudian php artisan breeze:install blade

```
PS D:\laragon\www\PWEBPROJEK> composer require laravel/breeze --dev
./composer.json has been updated
Running composer update laravel/breeze
Loading composer repositories with package information
Updating dependencies
Lock file operations: 1 install, 0 updates, 0 removals
  - Locking laravel/breeze (v2.4.1)
Writing lock file
Installing dependencies from lock file (including require-dev)
Package operations: 1 install, 0 updates, 0 removals
  - Downloading laravel/breeze (v2.4.1)
  - Installing laravel/breeze (v2.4.1): Extracting archive
Generating optimized autoload files
> Illuminate\Foundation\ComposerScripts::postAutoloadDump
```

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

5. Amankan semua route mahasiswa dengan middleware auth:
Route::middleware('auth')->resource('pesanan', PesananController::class)

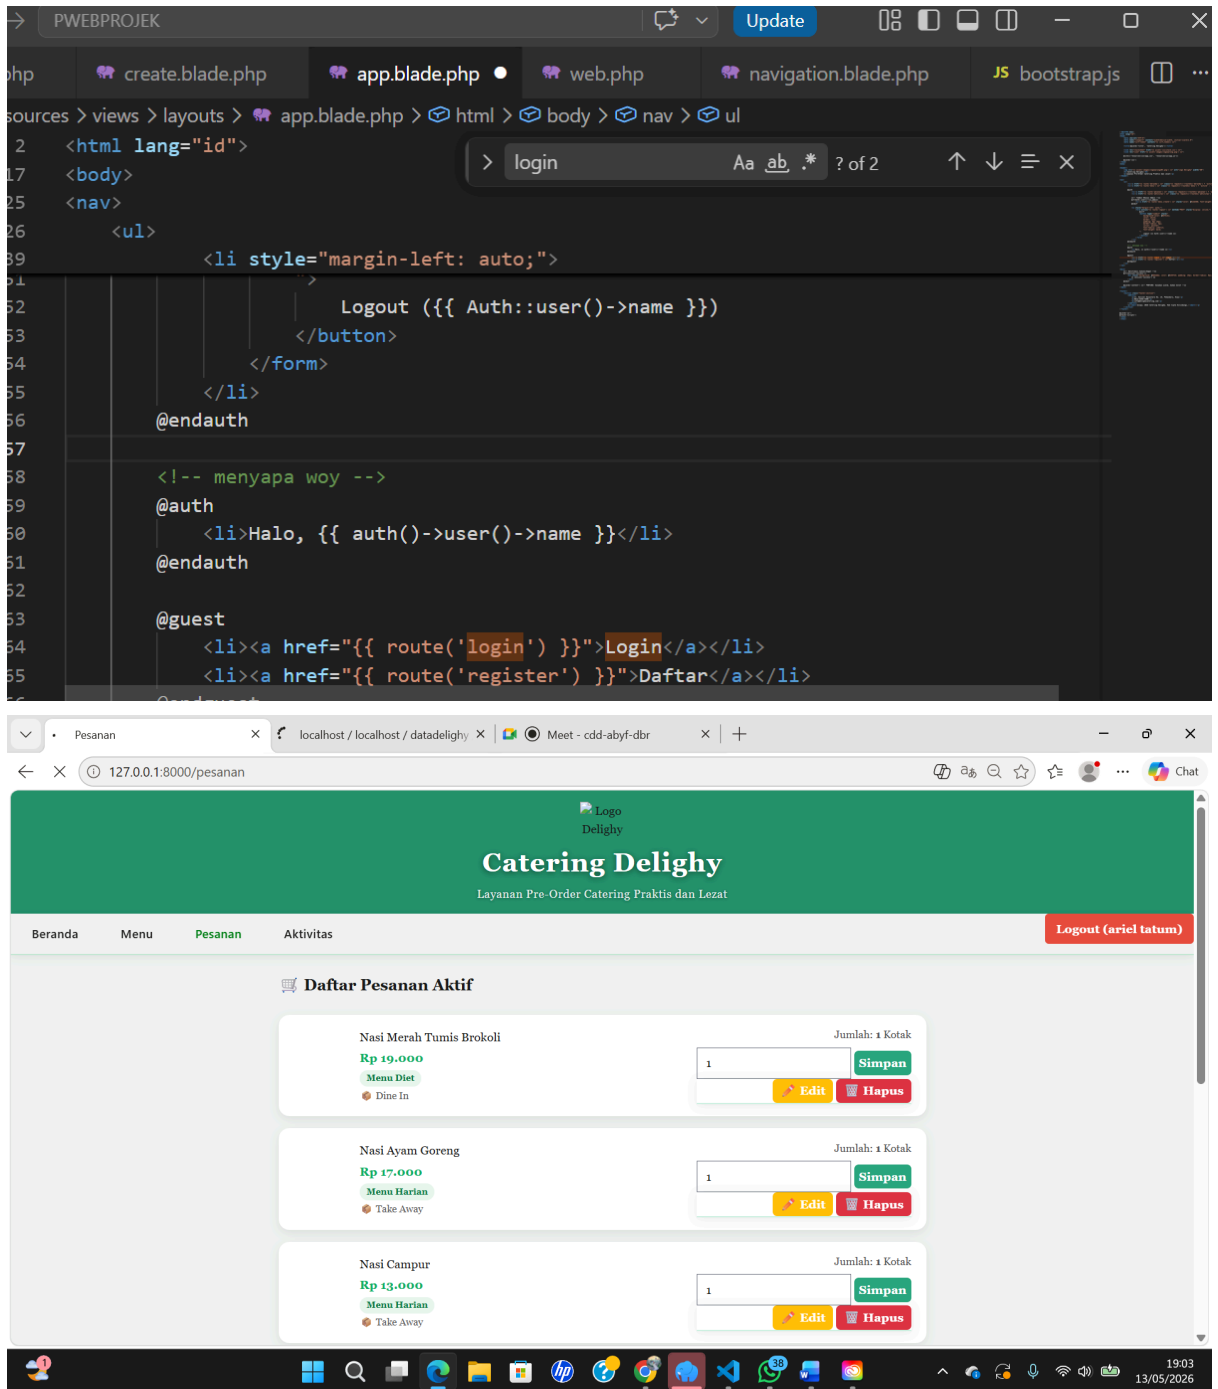

```
// 3. Route yang butuh Login (Auth)
Route::middleware('auth')->group(function () {
    // Dashboard bawaan Breeze, bisa dihapus yeah -min
    Route::get('/dashboard', function () {
        return view('dashboard');
    }->name('dashboard'));
});
```

6. Coba akses /pesanan tanpa login — pastikan di *redirect* ke halaman login

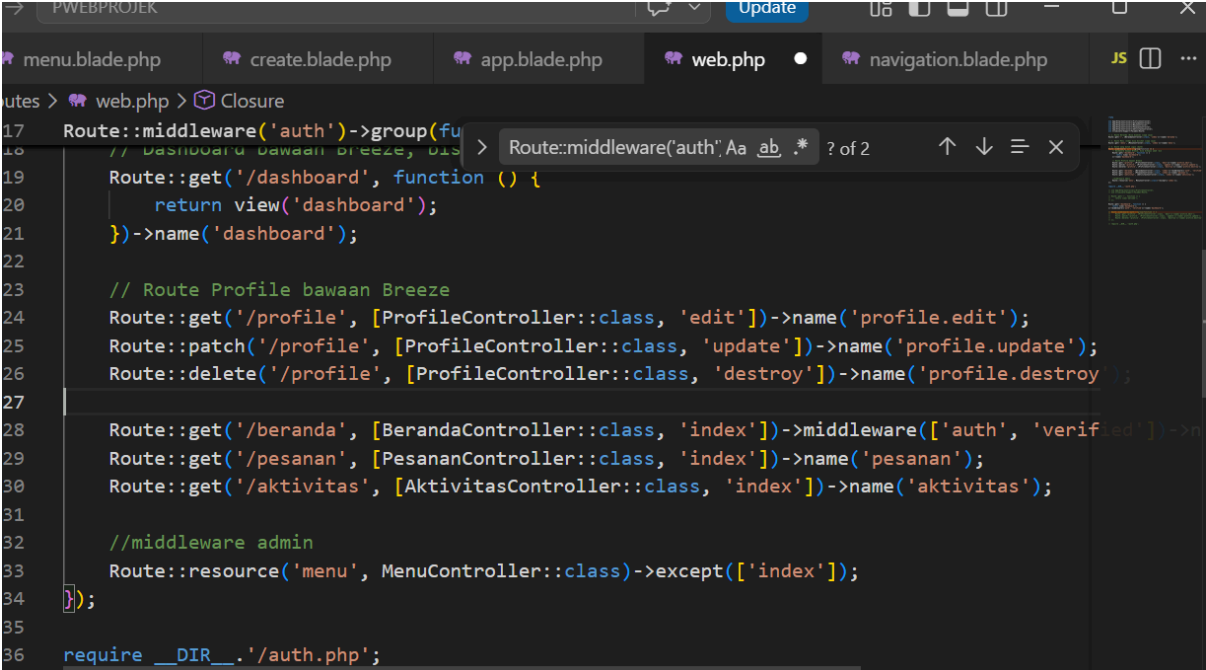

7. Tambahkan nama user di navbar: {{ auth()->user()->name }}

8. Buat custom middleware CekAdmin yang hanya mengizinkan user dengan role 'admin' mengakses route tertentu

```
17 Route::middleware('auth')->group(function () {
18     // Dashboard bawaan Breeze, Dis
19     Route::get('/dashboard', function () {
20         return view('dashboard');
21     })->name('dashboard');
22
23     // Route Profile bawaan Breeze
24     Route::get('/profile', [ProfileController::class, 'edit'])->name('profile.edit');
25     Route::patch('/profile', [ProfileController::class, 'update'])->name('profile.update');
26     Route::delete('/profile', [ProfileController::class, 'destroy'])->name('profile.destroy');
27
28     Route::get('/beranda', [BerandaController::class, 'index'])->middleware(['auth', 'verified'])->name('beranda');
29     Route::get('/pesanan', [PesananController::class, 'index'])->name('pesanan');
30     Route::get('/aktivitas', [AktivitasController::class, 'index'])->name('aktivitas');
31
32     //middleware admin
33     Route::resource('menu', MenuController::class)->except(['index']);
34 });
35
36 require __DIR__.'/auth.php';
```
