```
resources > views > components > stat-card.blade.php > article-stat-card.[{$SelectedClass}]
1 @props(['judul', 'nilai', 'ikon', 'warna' => 'blue'])
2
3 @php
4     $warnaClasses = [

AKTIVITAS 4

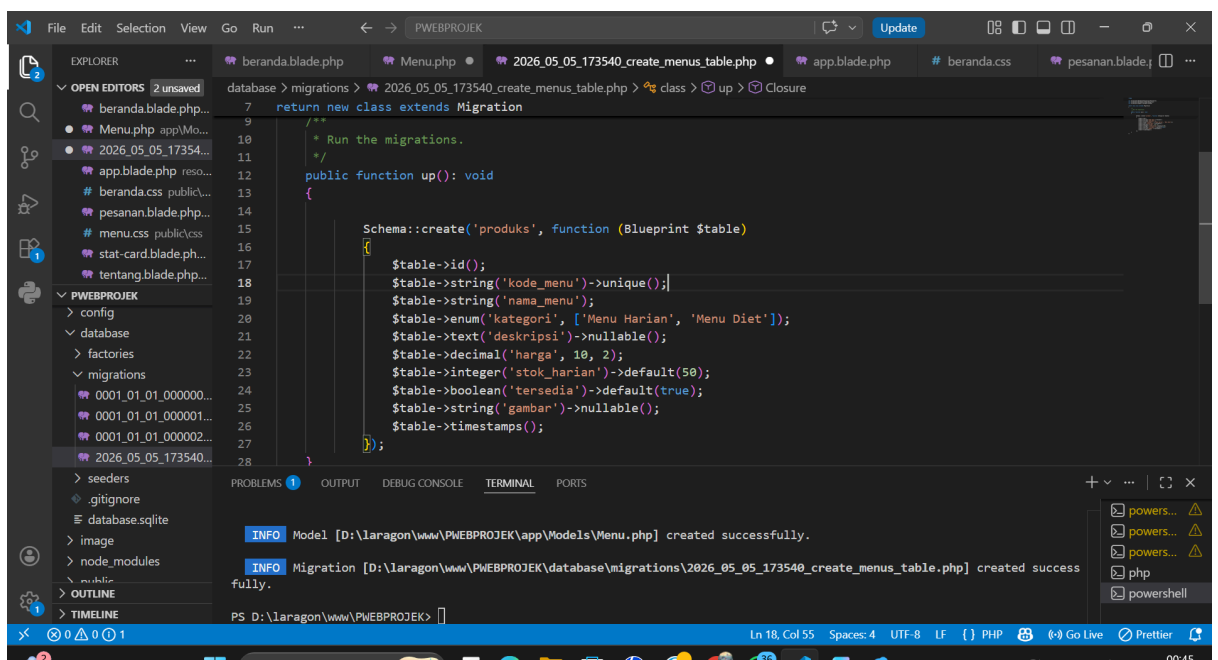

1. Buat Model dan Migration sekaligus: php artisan make:model Mahasiswa -m

The screenshot shows the Visual Studio Code editor with the 'PWEBPROJEK' workspace. The file explorer on the left shows the project structure. The main editor displays the 'beranda.blade.php' file. The terminal at the bottom shows the command 'php artisan make:model Menu -m' and its output, indicating that the model 'Menu' and the migration '2026_05_05_173540_create_menus_table.php' were created successfully.

4. Edit Model Mahasiswa: isi `$fillable`, tambahkan `$casts`, dan buat local scope `scopeAktif()`

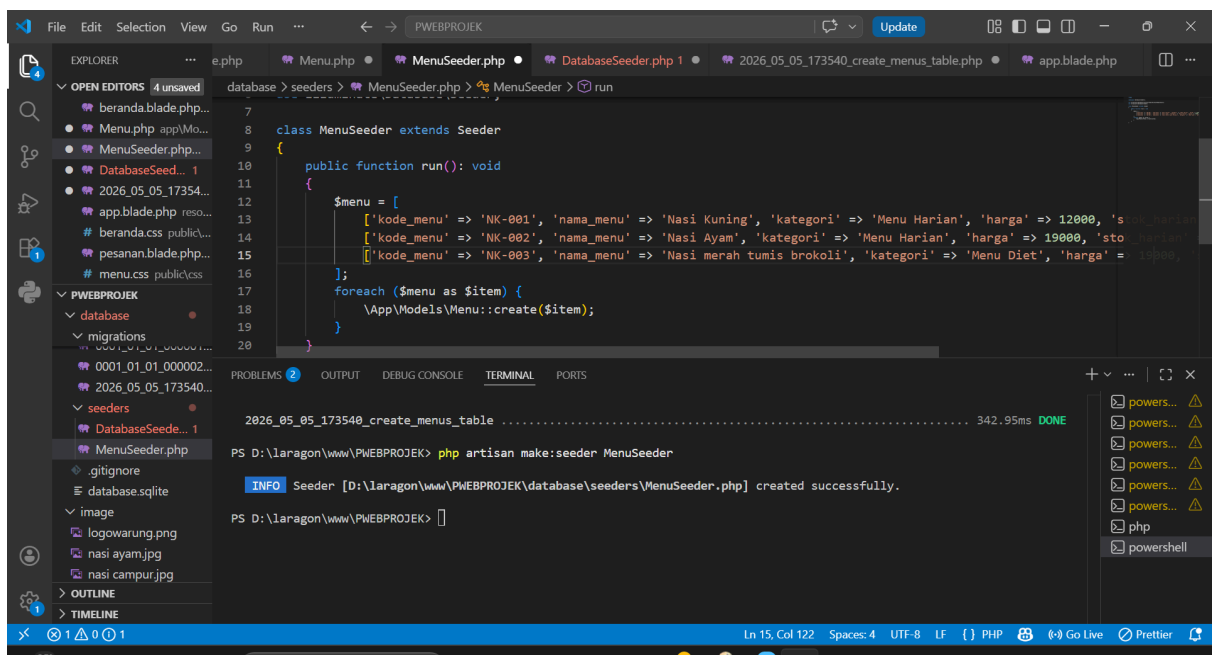

The screenshot shows the VS Code editor with a file explorer on the left and a code editor in the center. The code editor shows the `Menu.php` file, which is a Laravel model. The code includes the `namespace App\Models;` declaration, the `use Illuminate\Database\Eloquent\Model;` import, and the `class Menu extends Model` definition. The `$fillable` property is set to an array of fields: `'kode_menu', 'nama_menu', 'kategori', 'deskripsi', 'harga', 'stok_harian', 'tersedia', 'gambar'`. The `$casts` property is set to an array of casts: `'harga' => 'decimal:2', 'stok_harian' => 'integer', 'tersedia' => 'boolean'`. The `scopeTersedia($query)` method is defined to filter the results by the `tersedia` field.

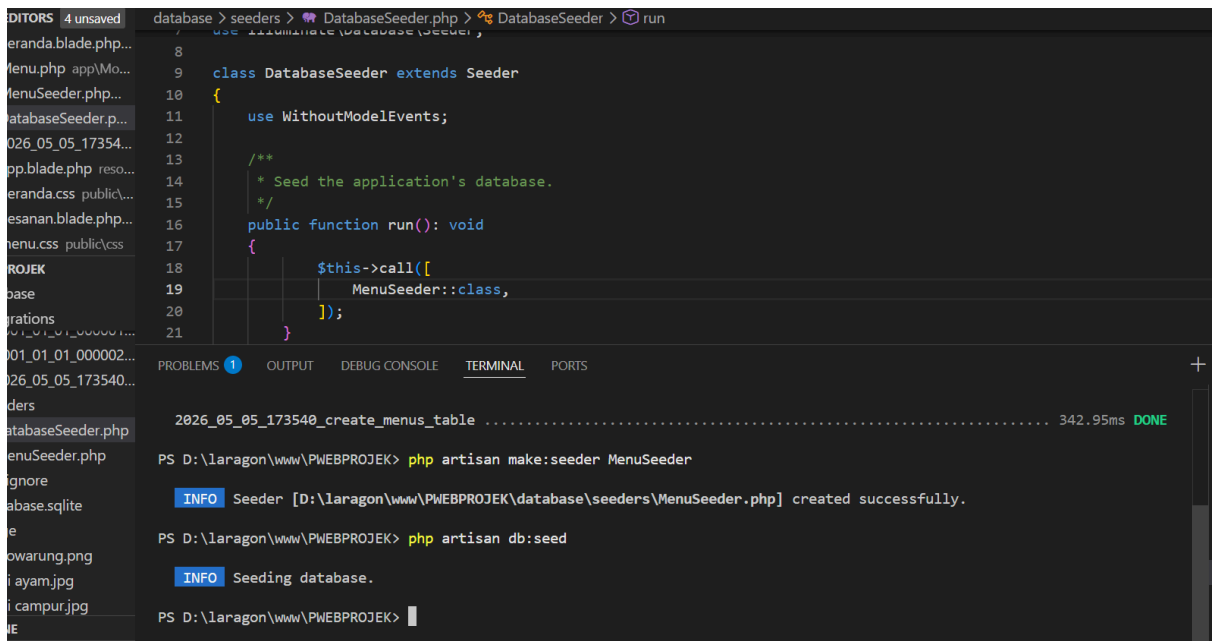

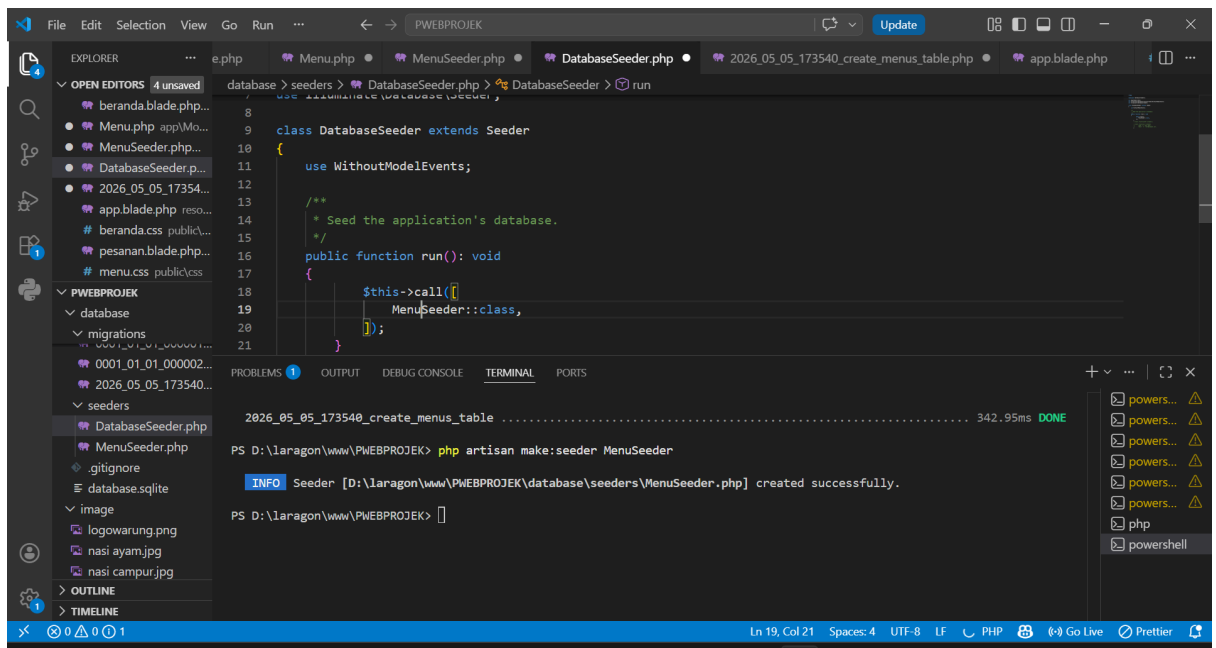

```
app > Models > Menu.php > Menu > scopeTersedia
1  <?php
2  namespace App\Models;
3
4  use Illuminate\Database\Eloquent\Model;
5
6  class Menu extends Model
7  {
8      protected $fillable = [
9          'kode_menu', 'nama_menu', 'kategori', 'deskripsi',
10         'harga', 'stok_harian', 'tersedia', 'gambar'
11     ];
12
13     protected $casts = [
14         'harga' => 'decimal:2',
15         'stok_harian' => 'integer',
16         'tersedia' => 'boolean',
17     ];
18     public function scopeTersedia($query)
19     {
20         return $query->where('tersedia', true);
21     }
22 }
```

5. Buat seeder: `php artisan make:seeder MahasiswaSeeder` — isi dengan 5-10 data dummy

6. Daftarkan seeder di DatabaseSeeder.php dan jalankan: php artisan db:seed

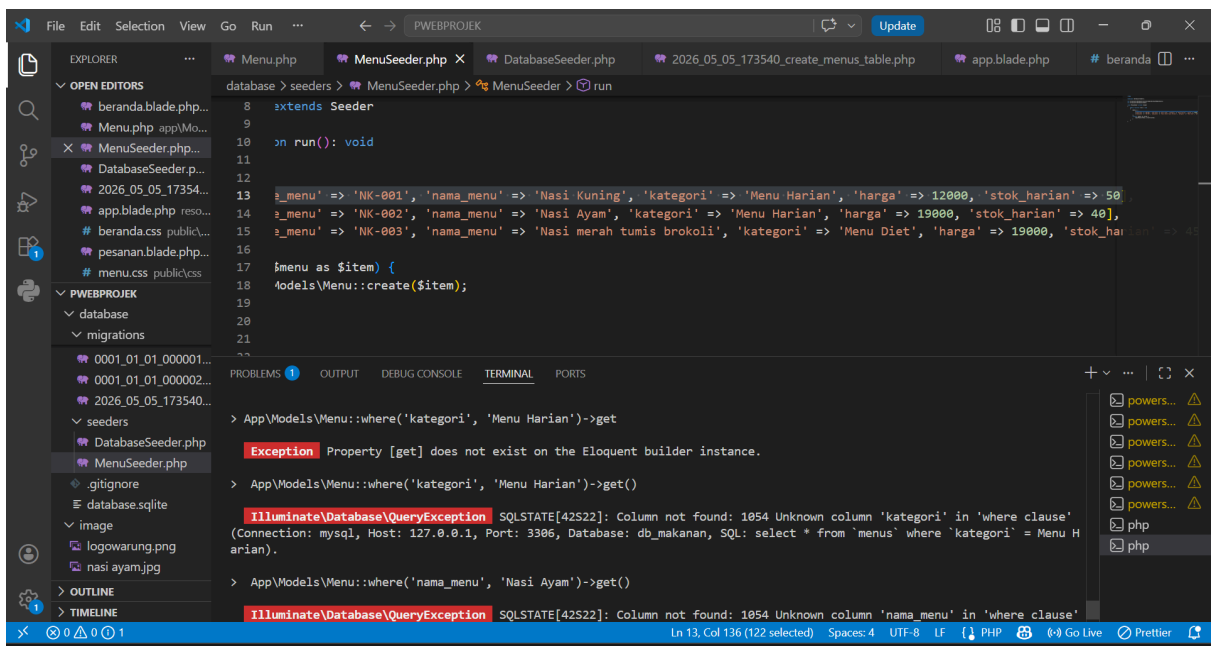

7. Buka php artisan tinker dan coba query: `Mahasiswa::all()`, `Mahasiswa::where('jurusan','SI')->get()`, `Mahasiswa::avg('ipk')`

```
> App\Models\Menu::create([]);

= Illuminate\Database\Eloquent\Collection {#8196
  updated_at: "2026-05-05 18:41:30",
  created_at: "2026-05-05 18:41:30",
  id: 1,
}
```

```
> App\Models\Menu::all();

= Illuminate\Database\Eloquent\Collection {#8080
  all: [],
}
```
